$\qquad$

## RememBer PEMDAS!

Part A: Simplify the following expressions using the Order of Operations.

1. $(44-4) \div 5+4^{2}$
2. $(46-16) \div 3+5^{2}$
3. $2 \mathrm{x}(4+3)+4^{2}$
4. $\left(9 \div 3+2^{3}\right)-10$
$\qquad$
$\qquad$
5. $\left(49-3^{2}\right) \div(3+7)$
6. $5 \times(6-3)-4^{3}$

Part B: Solve the equations.
7. $(6+2)^{2}+(y \div 4)=69$
8. $\left(66-z^{2}\right) \div(8-6)=25$
10. $24 \div(h+2) \times 4=16$

$$
\text { 9. }(24 \div h)+(2 \times 4)=16
$$

$\qquad$

## VOCaBulary Challence

Directions: Match the words from the Word Bank with their definitions below.

| A. operation | B. shudder | C. mope | D. vendor |
| :---: | :---: | :---: | :---: |
| E. frazzled | F. sluggish | G. equipped | H. parentheses |
| I. exponent | J. illuminate | K. calculate | L. scheme |

1. $\qquad$ a pair of signs used to mark off a section of text or a mathematical expression
2. $\qquad$ to tremble with a sudden movement
3. $\qquad$ slow
4. $\qquad$ to brighten, clarify, or add knowledge
5. $\qquad$ a number or symbol placed above and to the right of another number or symbol to indicate the mathematical power of that number or symbol
6. $\qquad$ worn out
7. $\qquad$ prepared
8. $\qquad$ to sulk
9. $\qquad$ plan
10. $\qquad$ to figure out
11. $\qquad$ a person or company that sells something
12. $\qquad$ an act or process

Name $\qquad$

## Wacky ways, Crazy Day

Part A: Answer the following questions about the story, Please Excuse My Dear Aunt Sally.

1. What is funny about some of the characters' names in this story?
2. Explain in your own words the metaphor of the businesses preparing for the festival being compared to the Order of Operations.
3. Why do you think Dylan is always apologizing for his Aunt Sally? If she was your aunt, would you feel the need to do this, too?
4. Do you feel the businesses Aunt Sally asked to help with the festival did a good job doing their parts? Why or why not?
5. Can you creatively come up with an "equation" using letters and/or numbers, representing the characters and their parts in planning the festival, showing how each part needed to be done in a certain order? Have fun with this and don't worry if it doesn't make perfect sense.

Part B: In the Playbook ${ }^{\circledR}$ story, Please Excuse My Dear Aunt Sally, Dylan thinks he knows almost everything about math. He doesn't understand how he managed to do so poorly on his test. Have you ever thought you understood or knew something, but something didn't quite make sense, or you couldn't figure out what you were missing? This could have to do with school, a social situation, or anything! Write a short essay on the lines below explaining the situation and how you eventually solved the "mystery."
$\qquad$

## Balloon Science

In the Playbook ${ }^{\circledR}$ story, Please Excuse My Dear Aunt Sally, one of the festival costs was 100 balloons! In this activity, you will learn about some of the science behind balloons.

Part A: Below are some interesting facts about the chemistry behind balloons.

- Why do balloons float in the air? They are filled with helium (He), which is lighter than the air we breathe.
- How does the material balloons are made of allow them to function the way we intend? They are made of rubber which is very flexible, so it stretches, allowing the balloon to be blown up. A "balloon made out of paper wouldn't inflate into the round shape we want!

1. Fill in the following information about the element, Helium, using the Internet or your science book.

Atomic Number: $\qquad$
Atomic Weight: $\qquad$
Melting Point: $\qquad$
Boiling Point: $\qquad$
Density:
Phase at Room Temperature: $\qquad$
Element Classification:
Period Number: $\qquad$ Group Number: $\qquad$ Group Name: $\qquad$
2. What is the approximate composition of the air we breathe? Include the different elements and percentages of each. $\qquad$

Part B: You can complete this balloon experiment in your classroom!
Materials:
Balloons (not inflated)
Acetic acid (vinegar)
Sodium bicarbonate (baking soda)
Beakers
Plastic soda bottles
Funnels
Procedure: Pour 80 mL of acetic acid into the plastic bottle using the beaker. With the funnel, fill the balloon with 2 tablespoons of sodium bicarbonate. Place the opening of the balloon over the neck of the bottle and turn it upside down, emptying the sodium bicarbonate into the bottle.

## Results:

1. Describe what happens.
2. Explain why this experiment works.
$\qquad$

## working on a BuDGet

Directions: In the Playbook ${ }^{\circledR}$ story, Please Excuse My Dear Aunt Sally, Dylan and Aunt Sally need to make sure the town stays under budget for its festival. In this activity, pretend you are in charge of budgeting for a community concert. Read the specifications below and fill in potential costs for each component in order to stay within your budget.

Total Budget: $\$ 6,000$

## Items and Services Required:

- 2 Stages
- 3 Speakers and 4 Microphones
- Venue
- Publicity (10 posters, 1 newspaper advertisement)
- Band
- Food and drinks for refreshment stand (add any other components you think of on extra lines)
- 
- $\qquad$
Cost of Each: $\qquad$
Cost of Each: $\qquad$
Cost: $\qquad$
Cost of Each: $\qquad$
Cost: $\qquad$
Cost of Each: $\qquad$
Cost: $\qquad$
Cost: $\qquad$
Cost: $\qquad$
Now write a mathematical expression showing how each individual cost adds up to the total cost. Use parentheses and show each mathematical operation. Then write the total cost to confirm you have stayed under or at your budget.

Next, pretend you have sold 221 tickets to the event at $\$ 10$ each. Add this information to your expression, and then figure out the balance after combining your event expenditures and the income from ticket sales.

In the Playbook® story, the town saved money because several people donated supplies and services. Can you think of any ways to reduce your costs for your event?

Balloon Science

## Part A:

1. Atomic Number: 2

Atomic Weight: 4.002602
Melting Point: $0.95 \mathrm{~K}\left(-272.2^{\circ} \mathrm{C}\right.$ or $\left.-458.0^{\circ} \mathrm{F}\right)$
Boiling Point: $4.22 \mathrm{~K}\left(-268.93^{\circ} \mathrm{C}\right.$ or $\left.-452.07^{\circ} \mathrm{F}\right)$
Density: 0.0001785 grams per cubic centimeter
Phase at Room Temperature: Gas
Element Classification: Non-metal
Period Number: 1 Group Number: 18 Group Name: Noble Gas
2. $78 \%$ nitrogen, $21 \%$ oxygen, $1 \%$ other including carbon dioxide and argon

## Part B:

1. The balloon inflates.
2. The vinegar and the baking soda reacts when it mixes and forms carbonic acid. Carbonic acid immediately breaks down into water and carbon dioxide. The carbon dioxide released inflates the balloon.

Wacky Ways, Crazy Day

1. Parker Exley = Parentheses and Exponents, Mrs. Divine = Multiplication and Division, and Adam Subs = Addition and Subtraction
